

Can your aging MS data system do this?

- Run on Windows 2000 or Windows XP.
- Easily backup data to DVD±R, CD-R, tape, or your network backup server.
- Run on the latest PC's.
- Utilize the latest printers with local and network support.
- Work well in a workgroup environment.
- Integrate easily with Hewlett-Packard and Agilent ChemStation™.

ADRON data acquisition systems can do this and more!

Vx™ is Adron Systems' next generation acquisition system, targeting Finnigan Magnum™, ITS40™, Varian Saturn I™ and compatible ion trap instruments.

- * Designed for Windows 2000 and Windows XP.
- * Integrates with Hewlett-Packard and Agilent ChemStation™.
- * Unified "browser" interface for quickly moving between tasks.
- * Easy software installation and configuration of instruments.
- * Software control of the Varian 3400 chromatograph and Leap CTC A200S autosampler.
- * Preview / demo version available on our website.

Vx replaces the aging, MS-DOS based data system originally found on these ion traps with a state-of-the-art PC and operating system; bringing advantages of networking and workgroups to your laboratory.

Vector/2™ and EnviroLink™ replacement data systems help preserve your investment in aging HP, Finnigan, Varian, Vestec, Perkin-Elmer, Extrel, and Vestec GC/MS & LC/MS instruments.

- * The new "On Windows" versions of Vector/2 and EnviroLink are an essential upgrade for current users. This upgrade moves HP ChemStation processing from the "Win-OS2" session directly onto the Windows 2000 or Windows XP desktop; providing easier access, easier printing, and improved reliability.
- * The "On Windows" version provides the benefits of Windows (networking, data backup, printer support and workgroups) while maintaining your current investment.
- * Vector/2 and EnviroLink data systems work with a variety of mass spectrometers, chromatographs and autosamplers; letting you mix and match according to your laboratory's needs.

Adron Systems, the company:

- * Focused on providing GC/MS and LC/MS solutions for research and production laboratories.
- * Acquired the Vector/2 and EnviroLink product lines from ProLab Resources in 2002. Adron Systems continues to support and enhance these data systems.
- * Adron Systems' founder also co-founded ProLab Resources, Inc. Adron Systems continues to work closely with ProLab Resources; together supplying data system solutions.
- * Adron Systems' founder worked on the design and implementation of the Vector/2 and EnviroLink data systems as software development manager for Teknivent Corporation in the early 1990's.
